ClockPoint runs your workforce.

Schedules, attendance, leave and salaries — one system,
on any screen you already own.

English · كوردی · العربية — the first workforce system that speaks all three.

clockpoint · the truth about work

The system your company runs on.

ClockPoint is a complete workforce platform — one system that handles everything between hiring a worker and paying them. It replaces the fingerprint machine, the scheduling whiteboard, the paper leave forms, the payroll Excel sheets and the "where is everyone?" phone calls.

Who's working

Employees check in and out with face recognition and GPS on any phone or tablet — presence is verified, never claimed.

When they work

Shifts, weekly schedules and rotas that managers build on their phones and HR approves.

When they're away

Leave requests, balances and approvals for every leave type — routed and escalated automatically.

What they're paid

Full payroll: hours, overtime, deductions, allowances, loans and payslips — calculated from verified attendance.

Who's in charge

Managers run their teams from their phones. HR governs everything. The owner watches the whole company live from an executive app.

~~NO PIN.~~

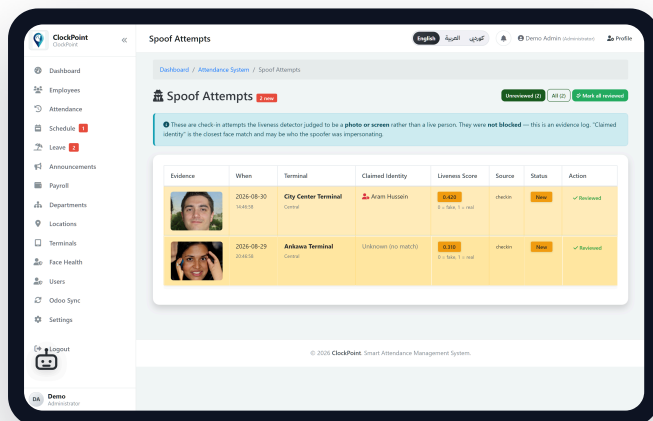

~~NO CARD.~~

~~NO FINGERPRINT.~~

~~NO MACHINE.~~

JUST YOUR FACE.

A live face is the only key that opens a working day. It can't be lent, lost, copied or forgotten in a taxi. Photos are rejected by a real liveness model — and every attempt is kept as evidence.

Not on site? The button doesn't exist.

Check-in and check-out are gated by GPS. Until the worker is physically standing inside your site's circle, there is nothing to press — no punching from home, from a taxi, or from the coffee shop across the street.

- Each site has its own circle — 39 meters means 39 meters.
- Both directions gated: sneaking away early fails the same way.
- Every punch stores a face, GPS point and timestamp — forever.

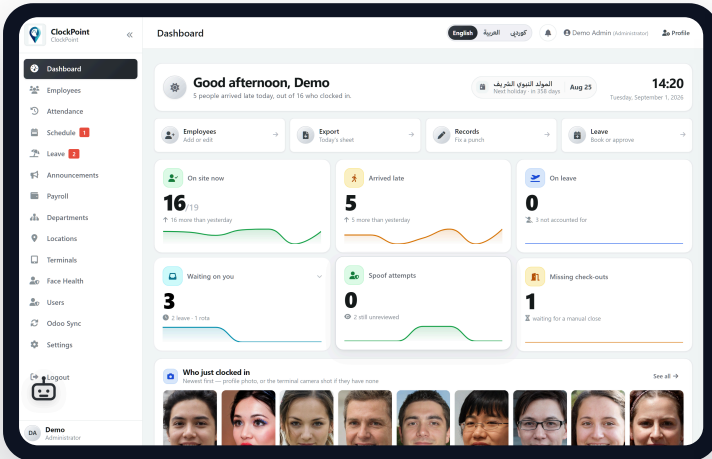

CAUGHT ON CAMERA

Cheaters get photographed.

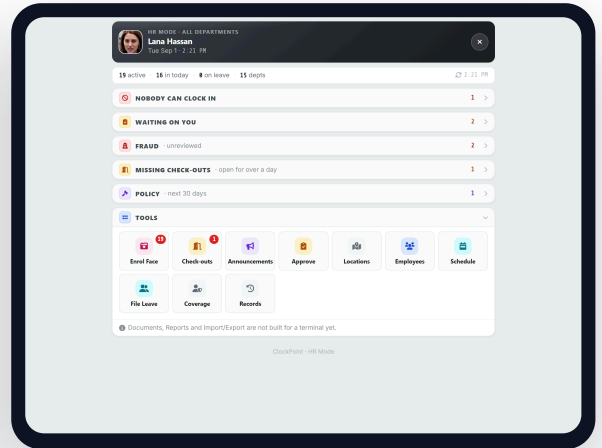

A photo held to the camera is rejected and logged with the cheater's own picture, in HR's review queue. This is the actual screen.

Buddy punching dies here.

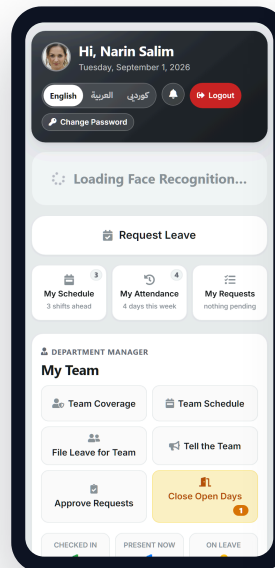

The phones in pockets, a tablet on the wall, the laptop in the office.

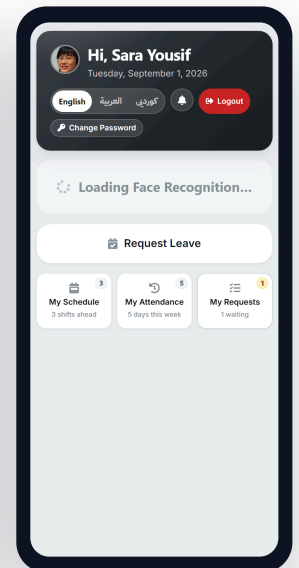

The owner's dashboard — live presence, late arrivals, fraud attempts, missing check-outs

HR Mode on a wall tablet — escalations only; an empty screen is the success state

A manager's phone

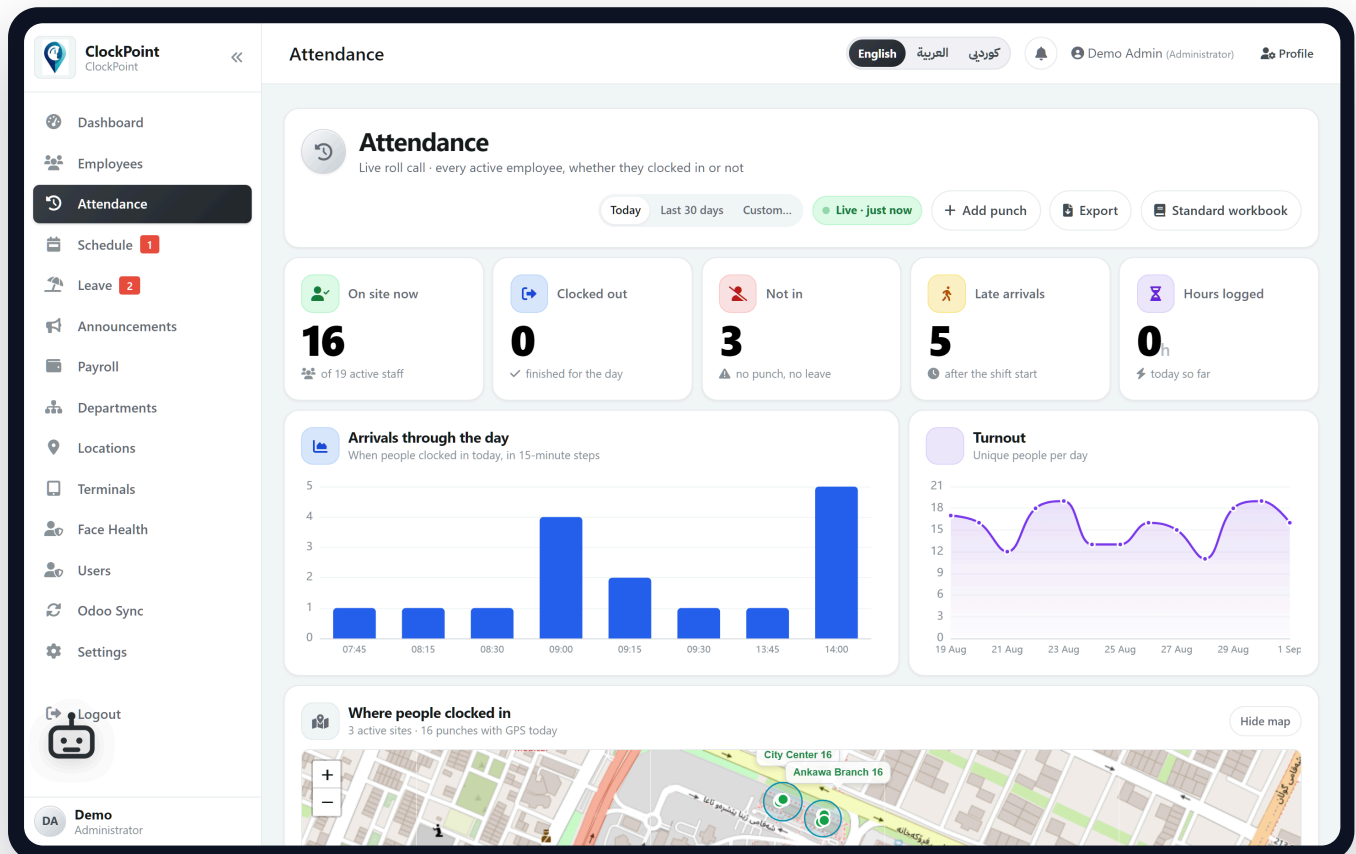

A worker's phone

Nothing to buy. Every screen above is the real product, running on devices your company already owns.

What happens on his phone appears on her screen.

A worker taps Check In — his dot lands on HR's live map. He files leave — the request finds the right manager, and escalates by itself if ignored. HR approves the week — his phone hears about it instantly.

The live attendance screen — every employee, every site, on a real map with geofence circles

- Requests find the closest manager above the worker — nothing rots in anyone's pocket.
- Managers write the weekly rota from their phones; only HR approval makes it real.
- A forgotten check-out is owned, escalated after one day, and blocks payroll until closed.

Salaries calculate themselves.

Verified hours become money by rules, not moods — overtime, lateness, allowances, loans that pay themselves off. Below: a real run for 19 people, derived from real punches.

IQD — derived, not typed

323

verified punches behind it

3

languages on every payslip PDF

The run locked itself: one worker forgot to check out, so payroll refuses to confirm until his day is closed

- A guaranteed share of salary that deductions can never touch.
- Iraqi working calendar: weekends and public holidays drive the real pay math.
- Payslip PDFs and Excel exports in the worker's own language — with proper RTL.

The system refuses to lie.

Even Odoo doesn't have this.

Odoo records attendance — but it trusts whoever taps the screen. No live-face check, no GPS gate. ClockPoint is the **first system on the market** that feeds Odoo punches that are actually proven: a real face, standing on a real site.

Keep your ERP

Odoo stays exactly as it is — ClockPoint becomes its lie detector.

Free kiosk mode

Employees in, verified punches back — no paid API subscription, \$0 monthly fees.

One-click sync

Import employees and departments in one click, with sync logs and retry tracking.

THE FIRST FACE + GPS ATTENDANCE THAT SPEAKS OD00

HR that answers at 2 AM.

A built-in AI assistant reads your live data and answers like a colleague — who's late, who's off next week, what absence cost this month. It answers in English, Arabic or Kurdish — whichever you ask in. Admin-controlled: your key, your on/off switch, your data only.

And it keeps going.

Announcements

One message → everyone's phone, as push notifications.

Documents

Passports, contracts, permits — with expiry alerts.

Face Health

Finds weak or confusable enrolments before they bite.

Forgotten check-outs

Owned, escalated, closed — never lost.

Working calendar

Weekends & Iraqi holidays drive real pay math.

Nightly backups

Automatic, with an off-site Dropbox copy.

HR Mode

Escalations only. An empty screen is the success state.

Audit trail

Every action, by whom, when. Nothing edits silently.

Excel in / out

Import your staff list; export anything, at any grain.

THE WHOLE COMPANY, PROVEN

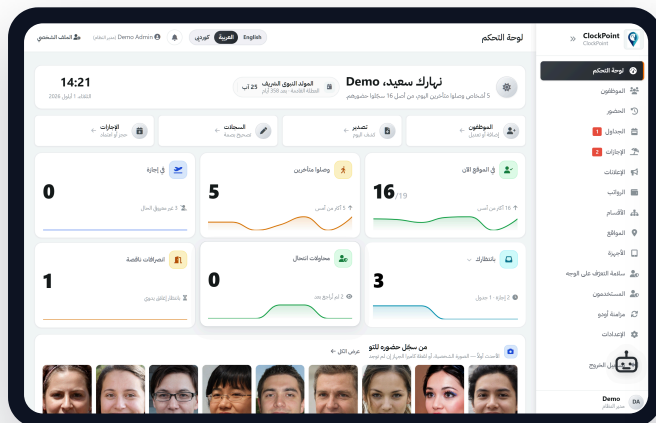

Every face verified. Every day. No cards, no codes, no favors between friends.

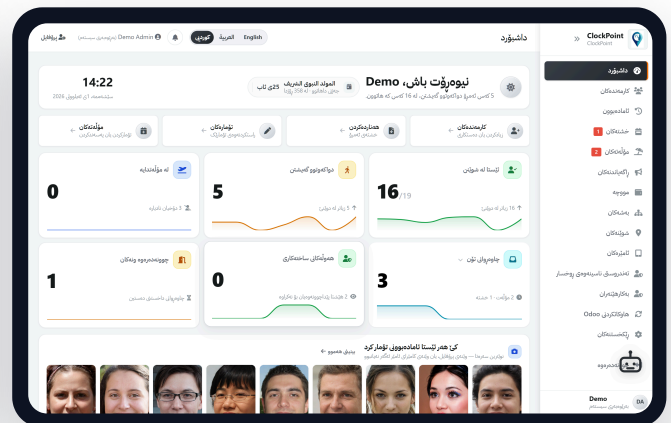

The first workforce system that speaks all three.

English, Arabic and **Sorani Kurdish** — the first and only platform on the market that runs in all three, down to every screen, every Excel export and every payslip PDF. Proper right-to-left, Iraqi month names. Not a translated menu — the whole system.

یتکلم به زمانه‌که‌ی IN YOUR
لغتک. تۆ. LANGUAGE.

The same dashboard — in Arabic, fully right-to-left

...and in Sorani Kurdish. Nobody else ships this.

EN • کو • ع — NOBODY ELSE SHIPS THIS

Every plan is the whole system. Add-ons are your call.

Pick a plan sized to your team — active employees and work sites: Hatch, Starter, Growth, Business, or Enterprise. Every plan runs everything. Payroll, Odoo sync and the AI assistant are add-ons you switch on **only when you need them**.

ADD-ON

Your data sleeps in your house.

Your own private system

One installation, one database — yours. No shared cloud next to your salaries.

Evidence for everything

Every punch keeps a face, a GPS point and a timestamp. Every action is audited.

Backed up every night

Automatic backups with an off-site copy. Restore is a button, not a prayer.

Fair in both directions

The proof that stops cheating also means overtime can't be denied.

Bring your best cheater.

Book a demo. Hold a photo to the camera. Walk outside the circle. Watch the system refuse — and log the attempt with a picture.

If he can fool it, don't buy it.

CHAT on the website — we answer in English, Arabic & Kurdish
